Safety notes

- The ball valve has to be exercised at least once a week, so that the quality of potable water as well as the functionality are not affected.
- The valve has been designed for use in stationary potable water systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- The valve does not contain any parts that can be replaced or repaired by the user.

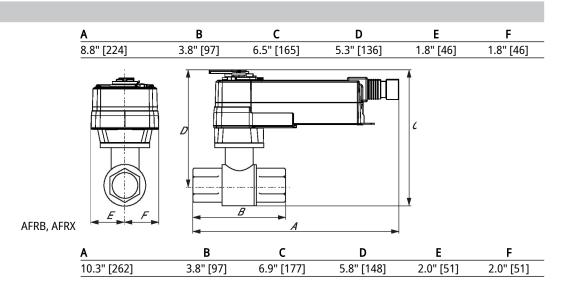

Product features		
Operating mode	The on/off ball valve is adjusted by a rotary actuator. The rotary actuator is connected by an on/off signal. Open the ball valve counterclockwise and close it clockwise.	
Installation notes		
Notes		e. To fulfil this control task in the long term, the circuit mu .g. welding beads during installation work).
Permissible installation orientation	The ball valve can be installed uprig hanging position, i.e. with the stem	ght to horizontal. The ball valve may not be installed in a pointing downwards.

Any tem concerned must also be switched off and the ow all components to cool down first if necessary and to ambient pressure level).
	-	o service until the ball valve and the rotary actuator have ordance with the instructions and the pipeline has been ersonnel.
Flow direction	Please also ensure that the ball is ir	n the correct position (marking on the shaft).

Electrical installation

X INSTALLATION NOTES

 \bigwedge Provide overload protection and disconnect as required.

Actuators may be connected in parallel. Power consumption and input impedance must be observed.

Actuators may also be powered by DC 24 V.

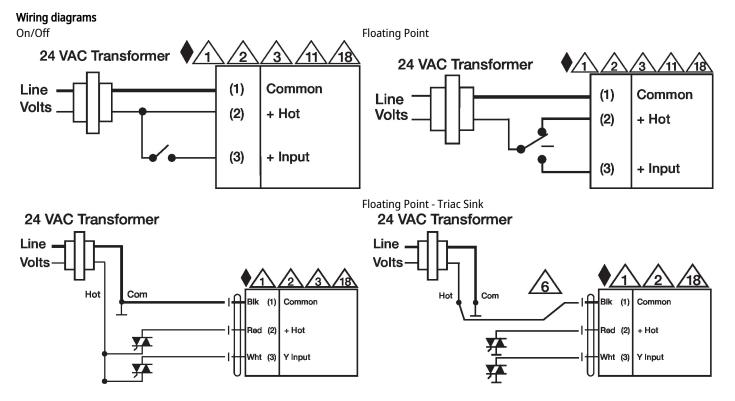

Actuators Hot wire must be connected to the control board common. Only connect common to neg. (-) leg of control circuits. Terminal models (-T) have no-feedback.

Actuators with plenum cable do not have numbers; use color codes instead.

Meets cULus requirements without the need of an electrical ground connection.

Warning! Live electrical components!

During installation, testing, servicing and troubleshooting of this product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.
