

Globe valve actuator with fail-safe for 2-way and 3-way globe valves

- Actuating force 2500 N
- Nominal voltage AC 24 V
- Control 3-point
- Stroke 40 mm

Technical data

| | | |
|------------------------|--|---|
| Electrical data | Nominal voltage | AC 24 V |
| | Nominal voltage frequency | 50/60 Hz |
| | Nominal voltage range | AC 19.2...28.8 V |
| | Power consumption in operation | 4.5 W |
| | Power consumption for wire sizing | 9 VA |
| | Connection supply / control | Terminals with cable 1 m, 4x 0.75 mm ² (Terminal 4 mm ²) |
| | Parallel operation | Yes (note the performance data) |
| Functional data | Actuating force motor | 2500 N |
| | Setting fail-safe position | Stem retracted / extended, adjustable (POP rotary knob) |
| | Bridging time (PF) | 2 s |
| | Manual override | with push-button |
| | Stroke | 40 mm |
| | Running time motor | 150 s / 40 mm |
| | Running time fail-safe | 35 s / 40 mm |
| | Sound power level, motor | 56 dB(A) |
| | Sound power level, fail-safe | 60 dB(A) |
| Position indication | Mechanical, 5...20 mm stroke | |
| Safety data | Protection class IEC/EN | III, Safety Extra-Low Voltage (SELV) |
| | Power source UL | Class 2 Supply |
| | Degree of protection IEC/EN | IP54 |
| | Degree of protection NEMA/UL | NEMA 2 |
| | Enclosure | UL Enclosure Type 2 |
| | EMC | CE according to 2014/30/EU |
| | Certification IEC/EN | IEC/EN 60730-1 and IEC/EN 60730-2-14 |
| | UL Approval | cULus according to UL60730-1A, UL60730-2-14 and CAN/CSA E60730-1 The UL marking on the actuator depends on the production site, the device is UL-compliant in any case |
| | Type of action | Type 1.AA |
| | Rated impulse voltage supply / control | 0.8 kV |
| | Pollution degree | 3 |
| | Ambient humidity | Max. 95% RH, non-condensing |
| | Ambient temperature | 0...50°C [32...122°F] |

Technical data

| | | |
|--------------------|---------------------|---|
| Safety data | Storage temperature | -40...80°C [-40...176°F] |
| | Servicing | maintenance-free |
| Terms | Abbreviations | POP = Power off position / fail-safe position |
| | | CPO = Controlled power off / controlled fail-safe |
| | | PF = Power fail delay time / bridging time |

Safety notes

- This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Outdoor application: only possible in case that no (sea) water, snow, ice, insolation or aggressive gases interfere directly with the device and that it is ensured that the ambient conditions remain within the thresholds according to the data sheet at any time.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.
- The switch for changing the direction of motion and so the closing point may be adjusted only by authorised specialists. The direction of motion is critical, particularly in connection with frost protection circuits.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Product features

Operating mode The actuator moves the valve to the desired operating position at the same time as the integrated capacitors are loaded. Interrupting the supply voltage causes the valve to be moved to the selected fail-safe position by means of stored electrical energy.

Pre-charging time (start up) The capacitor actuators require a pre-charging time. This time is used for charging the capacitors up to a usable voltage level. This ensures that, in the event of a power failure, the actuator can move at any time from its current position into the preset fail-safe position. The duration of the pre-charging time depends mainly on how long the power was interrupted.

Typical pre-charging time

[d] = Power failure in days
[s] = Pre-charging time in seconds

| | [d] | | | | |
|-----|-----|---|----|----|-----|
| | 0 | 1 | 2 | 7 | ≥10 |
| [s] | 6 | 9 | 11 | 16 | 20 |

Product features

- Delivery condition (capacitors)** The actuator is completely discharged after delivery from the factory, which is why the actuator requires approximately 20 s pre-charging time before initial commissioning in order to bring the capacitors up to the required voltage level.
- Setting fail-safe position (POP)** The rotary knob fail-safe position can be used to adjust the desired fail-safe position. The adjustment range always refers to the maximum height of stroke of the actuator.
In the event of a power failure, the actuator will move to the selected fail-safe position, taking into account the bridging time (PF) of 2 s set at the factory.
- Simple direct mounting** Simple direct mounting on the globe valve by means of form-fit hollow clamping jaws. The actuator can be rotated by 360° on the valve neck.
- Manual override** Manual control with push-button possible - temporary. The gear train is disengaged and the actuator decoupled for as long as the button is pressed.
The stroke can be adjusted by using a hexagon socket screw key (4 mm), which is inserted into the top of the actuator. The stroke shaft extends when the key is rotated clockwise.
- High functional reliability** The actuator is overload protected, requires no limit switches and automatically stops when the end stop is reached.
- Home position** Factory setting: Actuator stem is retracted.
When valve-actuator combinations are shipped, the direction of motion is set in accordance with the closing point of the valve.
- Setting direction of motion** When actuated, the stroke direction switch changes the running direction in normal operation. The stroke direction switch has no influence on the fail-safe position which has been set.

Accessories

| Electrical accessories | Description | Type |
|------------------------|---------------------------------|-------|
| | Auxiliary switch 2x SPDT add-on | S2A-H |

Electrical installation

Supply from isolating transformer.
Parallel connection of other actuators possible. Observe the performance data.
Direction of stroke switch factory setting: Actuator stem retracted (▲).

Wire colours:

- 1 = blue
- 2 = brown
- 3 = white
- 4 = white

Wiring diagrams

AC 24 V, 3-point

| | | | | | |
|---|---|---|---|------|------|
| 1 | 2 | 3 | 4 | | |
| | | | | | |
| | | | | stop | stop |
| | | | | | |

Operating controls and indicators

1 Direction of stroke switch

Switch over: Direction of stroke changes

2 Cover, POP button

3 POP button

4 Scale for manual adjustment

6 (no function)

7 Manual override button

Press button: Gear train disengages, motor stops, manual override possible

Release button: Gear train engages, standard mode

LED displays

| green 8 | Meaning / function |
|----------------|--|
| On | Operation OK |
| Flashing | POP function active |
| Off | - Not in operation - Pre-charging time SuperCap - Fault SuperCap |

10 Manual override

Clockwise: Actuator stem extends

Counterclockwise: Actuator stem retracts

Setting emergency setting position (POP)
