

Globe valve, 2-way, Flange, PN 16

- For closed chilled and hot water systems
- For modulating control of air-handling and heating systems on the water side

Picture may differ from product

Type overview

Type	DN	Kvs [m ³ /h]	Stroke	PN	n(gl)	Sv min.
H6200W630-S7	200	630	65 mm	16	3	30
H6250W1000-S7	250	1000	65 mm	16	3	30

Technical data

Functional data	Fluid	Chilled and hot water, water with glycol up to max. 50% vol.
	Fluid temperature	5...120°C [41...248°F]
	Flow characteristic	equal percentage (VDI/VDE 2173), optimised in the opening range
	Leakage rate	max. 0.05% of the Kvs value
	Closing point	Bottom (▼)
	Pipe connection	Flange according to ISO 7005-2
	Installation orientation	upright to horizontal (in relation to the stem)
	Servicing	maintenance-free
Materials	Valve body	EN-GJL-250 (GG 25)
	Body finish	with protective paint
	Closing element	Stainless steel
	Spindle	Stainless steel
	Spindle seal	EPDM
	Seat	Stainless steel

Safety notes

- The valve has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.
- The valve does not contain any parts that can be replaced or repaired by the user.
- The valve may not be disposed of as household refuse. All locally valid regulations and requirements must be observed.
- When determining the flow rate characteristic of controlled devices, the recognised directives must be observed.

Product features

- Operating mode** The large globe valve is adjusted by a long stroke actuator. The actuators are connected by a commercially available modulating or 3-point control system and move the valve cone, which acts as a throttling device, into the opening position dictated by the control signal.
- Flow characteristic** An equal percentage flow characteristic is produced by the profile of the valve cone.
- Fluid velocity** Standard values for low-noise operation in HVAC systems are fluid velocities of 1...2 m/s. At fluid velocities above 2 m/s, further flow effects like noise as well as cavitation can occur. This can reduce the service life of a valve depending on the situation.

Installation notes

- Permissible installation orientation** The large globe valves may be mounted from upright to horizontal. It is not permissible to mount the large globe valves with the stem pointing downwards.

- Water quality requirements** The water quality requirements specified in VDI 2035 must be adhered to. Belimo valves are regulating devices. For the valves to function correctly in the long term, they must be kept free from particle debris (e.g. welding beads during installation work). The installation of a suitable strainer is recommended.

- Servicing** Large globe valves and long stroke actuators are maintenance-free. Before any service work on the control element is carried out, it is essential to isolate the long stroke actuator from the power supply (by unplugging the electrical cables if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level). The system must not be returned to service until the large globe valve and the long stroke actuator have been correctly reassembled in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.

- Flow direction** The direction of flow, specified by an arrow on the housing, is to be complied with, since otherwise the valve could become damaged.

Differential and close-off pressure

The maximum differential and close-off pressure of globe valves depends on the mounted globe valve actuator. To ensure optimum operation and maximum service life, the maximum differential and close-off pressure in the table below must not be exceeded.

$p_s < 1600 \text{ kPa (PN16)}$ $t = 5 \dots 120^\circ\text{C}$		GV12... 15000 N	
	DN	Δp_s [kPa]	Δp_{max} [kPa]
H6200W630-S7	200	420	250
H6250W1000-S7	250	270	250

General notes

Delivery notes Large globe valve and long stroke actuator are supplied pre-mounted. These valves are fabricated only when orders are received.

Dimensions

Dimensional drawings

X/Y: Minimum distance with respect to the valve centre.
 The actuator dimensions can be found on the respective actuator data sheet.

Type	DN	L [mm]	B [mm]	H [mm]	C [mm]	D [mm]	d [mm]	K [mm]	X [mm]	Y [mm]	kg
H6200W630-S7	200	600	187	315	30	340	12 x 22	295	1210	200	156
H6250W1000-S7	250	730	233	375	32	405	12 x 26	355	1270	250	239
