

Globe valve, 3-way, Flange, PN 16

- For closed cold and warm water systems
- For modulating control of air-handling and heating systems on the water side

Type overview

Type	DN	Kvs [m³/h]	Stroke	PN	n(gl)	Sv min.
H715S	15	4	20 mm	16	3	50
H720S	20	6.3	20 mm	16	3	100
H725S	25	10	20 mm	16	3	100
H732S	32	16	20 mm	16	3	100
H740S	40	25	20 mm	16	3	100
H750S	50	40	20 mm	16	3	100
H765S	65	63	30 mm	16	3	100
H780S	80	100	30 mm	16	3	100
H7100S	100	160	30 mm	16	3	100
H7125S	125	220	40 mm	16	3	100
H7150S	150	320	40 mm	16	3	100

Technical data

Functional data	Fluid	Cold and warm water, water with glycol up to max. 50% vol.
	Fluid temperature	5...150°C [41...302°F]
	Fluid temperature note	120°C up to 1600 kPa 150°C up to 1400 kPa
	Flow characteristic	Control path A – AB: equal percentage (VDI/VDE 2173), optimised in the opening range, Bypass B – AB: linear (VDI/VDE 2173)
	Leakage rate	Control path A – AB: max. 0.05% of the Kvs value; Bypass B – AB: max. 1% of the Kvs value
	Closing point	Top (▲)
	Pipe connection	Flange according to ISO 7005-2
	Installation orientation	upright to horizontal (in relation to the stem)
	Servicing	maintenance-free
	Materials	Valve body
Body finish		with protective paint
Closing element		Stainless steel
Spindle		Stainless steel
Spindle seal		PTFE V-ring
Seat		Stainless steel

Safety notes

- The valve has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.
- The valve does not contain any parts that can be replaced or repaired by the user.
- The valve may not be disposed of as household refuse. All locally valid regulations and requirements must be observed.
- When determining the flow rate characteristic of controlled devices, the recognised directives must be observed.

Product features

- Operating mode** The globe valve is adjusted by a globe valve actuator. The actuators are controlled by a commercially available modulating or 3-point control system and move the valve cone, which acts as a mixing device, to the opening position dictated by the control signal.
- Flow characteristic** An equal percentage flow characteristic in the flow direction is produced by the profile of the valve cone. The bypass exhibits a linear characteristic curve.
- Fluid velocity** Standard values for low-noise operation in HVAC systems are medium velocities of 1...2 m/s. At fluid velocities above 2 m/s, further flow effects as well as cavitation can occur. This can reduce the service life of a valve depending on the situation.

Accessories

Electrical accessories	Description	Type
	Stem heater for LV.., NV.., SV.. actuator, AC/DC 24 V, 30 W	ZH24-1-A

Installation notes

Permissible installation orientation The globe valve may be mounted upright to horizontal. It is not permissible to mount the globe valves with the stem pointing downwards.

Water quality requirements The water quality requirements specified in VDI 2035 must be adhered to. Belimo valves are regulating devices. For the valves to function correctly in the long term, they must be kept free from particle debris (e.g. welding beads during installation work). The installation of a suitable strainer is recommended.

Servicing Globe valves and globe valve actuators are maintenance-free. Before any service work on the control element is carried out, it is essential to isolate the globe valve actuator from the power supply (by unplugging the electrical cables if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level).

The system must not be returned to service until the globe valve and the globe valve actuator have been reassembled correctly in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.

Installation notes

Flow direction The valve can be used as mixing valve A+B to AB and as diverting valve AB to A+B. The maximum pressure values are lower in diverting mode than in mixed mode (see mounting instructions).

Differential and close-off pressure

The maximum differential and close-off pressure of globe valves depends on the mounted globe valve actuator. To ensure optimum operation and maximum service life, the maximum differential and close-off pressure in the table below must not be exceeded.

Mixing

$p_s < 1600 \text{ kPa (PN16)}$ $t = 5 \dots 120^\circ\text{C}$ $p_s < 1400 \text{ kPa (PN16)}$ $t = 121 \dots 150^\circ\text{C}$		NV..A.. 1000N		SV..A.. 1500N		AVK..A.. 2000N		EV..A.. 2500N		RV..A.. 4500N
