VAV-Compact unit – with VAV controller, dynamic Δp sensor and damper actuator to be used with ZoneEase VAV. The VAV controller is supplied pre-addressed with MP7 so that it can be used directly with ZoneEase VAV.

- Field of application: VAV units in comfort applications
- Application: VAV/CAV
- Belimo D3, dynamic flow sensor
- Functional range differential pressure 0...500 Pa
- Control communicative
- Communication via Belimo MP-Bus
- Conversion of sensor signals (Sensor input can not be used with ZoneEase VAV)
- Tool connection: Service socket, NFC interface

Safety notes

- The device must not be used outside the specified field of application, especially not in aircraft or in any other airborne means of transport.
- Outdoor application: only possible in case that no (sea) water, snow, ice, insolation or aggressive gases interfere directly with the device and that it is ensured that the ambient conditions remain within the thresholds according to the data sheet at any time.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- Cables must not be removed from the device.
- The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Product features

Application

The VAV-Compact unit is used for comfort applications for pressure-independent control of VAV units. See Technical brochure – VAV-Compact product range for volumetric flow applications.

Pressure measurement

The integrated D3 differential pressure sensor is also suitable for very small volumetric flows. The maintenance-free sensor technology enables a wide range of applications in the HVAC comfort area such as in residential buildings, offices, hotels, etc.

Actuators

For the various applications and damper designs, various actuator variants with torque 5, 10 or 20 Nm are available to the VAV unit manufacturer.

Control functions

Volumetric flow (VAV/CAV) or position control (Open Loop)

Product features

Application Variable Air Volume (VAV)

Variable air volume control in the V'min...V'max range, demand-dependent via a modulating reference variable (analogue or bus), e.g. room temperature or CO_2 controller for energy-saving air conditioning of individual rooms or zones.

V'nom, Δp @ V'nom

OEM-specific calibration parameters, suitable for the VAV unit

Adjustment range Δp @ V'nom: 38...500 Pa

V'max (Max)

Maximum operating volumetric flow, adjustable 20...100% V'nom

V'min (Min)

Minimum operating volumetric flow, adjustable 0...100% V'nom

Application Constant Air Volume (CAV)

Constant volumetric flow control. If required, via step switching (switching contacts) for constant volumetric flow applications.

Steps: CLOSE / Min / Max / OPEN (Mid)

Application Position Control (Open Loop)

Position control for integration of the VAV-Compact into an external VAV control loop. Transmitter and actuator unit.

Max

Range: 20...100 % rotation range

Min

Range: 0...100 % rotation range

Demand Controlled Ventilation (DCV)

Output of the demand signal (damper position) to the higher-level automation system – DCV function.

Bus operation

Thanks to its MP-Bus functionality, the VAV-Compact can be easily integrated into a MP-Bus system. The communication interface and MP address is defined using service tools.

In bus mode, a sensor (0...10 V / passive) can optionally be connected, e.g. a temperature sensor or a switching contact, for integration into the higher-level bus system.

Operating settings

Installation notes

Installation situation

Mounting VAV-Compact control equipment:

The VAV-Compact is assembled, set and calibrated on the VAV unit in the factory by the VAV unit manufacturer.

Installation of the VAV unit:

The VAV unit must be installed according to the specifications of the VAV unit manufacturer.

Installation specification Δp sensor:

No restrictions, but it must be avoided that any condensation can run into the sensor and remain there.

Accessibility of control equipment:

Accessibility to the control equipment must be guaranteed at all times.

Servicing

Cleaning work during installation, commissioning or maintenance

Belimo VAV devices are maintenance-free. We recommend dry removal of dust from the outside of the housing if necessary.

The duct system and the VAV units are maintained on the occasion of the cleaning intervals required by law or by the specific system. Please observe the following points.

Cleaning work on the damper, differential pressure pickup devices and pressure tubes

When cleaning the duct system or the VAV unit, remove the pressure tubes on the VAV controller so that it will not be affected.

Using compressed air, e.g. blowing out the differential pressure pickup devices or pressure tubes

Before doing this work, disconnect the differential pressure pickup devices or pressure tubes from the differential pressure sensor.

Connecting the pressure tubes

To ensure the correct installation of the pressure tubes, we recommend marking them with + or – before disassembly.

Service

NFC connection

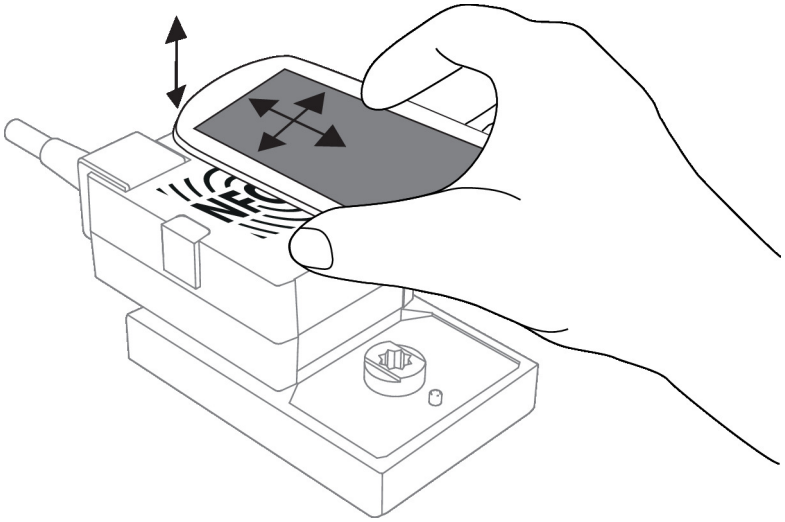
Belimo devices marked with the NFC logo can be operated with the Belimo Assistant App.

Requirement:

- NFC- or Bluetooth-capable smartphone
- Belimo Assistant App (Google Play & Apple AppStore)

Align NFC-capable smartphone on the device so that both NFC antennas are superposed.

Connect Bluetooth-enabled smartphone via the Bluetooth-to-NFC Converter ZIP-BT-NFC to the device. Technical data and operation instructions are shown in the ZIP-BT-NFC data sheet.



Tool connection

The actuator can be parametrised by ZTH EU via the service socket.

For an extended parametrisation the PC tool can be connected.
