## **Electrical installation**

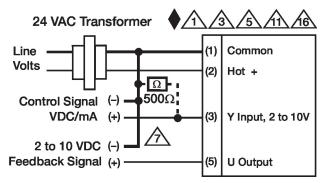

A Provide overload protection and disconnect as required.

 $\bigtriangleup$  Only connect common to negative (-) leg of control circuits.

 $\triangle$  A 500 Ω resistor (ZG-R01) converts the 4...20 mA control signal to 2...10 V.

Actuators may be connected in parallel if not mechanically linked. Power consumption and input impedance must be observed.

Actuators are provided with a numbered screw terminal strip instead of a cable.

2...10 V / 4...20 mA Control
